Meet Malware's Sworn Enemy:
Symantec IPS

Here's everything you need to know...

IPS adds a layer of protection to every endpoint.

Traditional antivirus tools detect malware only after it's in your system.

→

IPS stops malware before it hits your endpoints.

It proactively blocks over 95% of all the attacks visible to IPS.

→

IPS may be considered an optional layer...

but it's essential for an effective endpoint security strategy. And that's what we all want, right?

→
