

FORTINET

The Evolution of Endpoint Security

1980s

Antivirus (AV)

Scans endpoint files to identify and remove malware, known threats.

2000s

Next-Generation Antivirus (NGAV)

Employs machine learning & behavioral analysis to detect advanced malware.

2010s

Endpoint Protection Platform (EPP)

Integrates antivirus, firewalls, and controls for comprehensive malware prevention.

2015

Endpoint Detection & Response (EDR)

Detects & investigates
suspicious activities
continuously for
threat response.

2021

Extended Detection & Response (XDR)

Consolidates multi-source threat data, including endpoint, for unified analysis and remediation.

We're introducing
the **next generation**
of endpoint security.

Unified Endpoint with Access Control

Consolidates multi-source threat data, including endpoint, for unified analysis and remediation.

Future-proof your
endpoint security
with **FortiEDR**.
