

Smarter Defense. Less Chaos.

Proactively manage performance
and stop outages in their tracks.

Here's how we make it easier.

Step 1

Analyze with precision

Use machine learning to examine traffic that slipped past your current defenses—fast, efficient, and accurate.

Step 2

Detect what others miss

AI identifies hidden or emerging threats your systems may have overlooked—before they become problems.

Step 3

Get clear, actionable alerts

Be notified when new threats are detected, with AI-driven guidance that tells you exactly what to do next.

Step 4

Apply protection instantly

Let automation do the work. Apply recommended updates and countermeasures in real time—no manual effort needed.

Step 5

Stay protected, always

A solution built to handle it all.

NETSCOUT Arbor Edge Defense[®] integrates with nGeniusONE to automatically stop DDoS threats at the edge.
