

CASE STUDY

**How St. Francis
University reduced
their reporting
time **by 98%** with
Asset Panda**

The Challenge

St. Francis University's existing asset management system was so outdated that it was no longer serviceable.

"We had no ability to move the software to a newer computer or server. We were going to lose our data," Assistant Controller Thomas Kendziora said.

The Solution

In their search for a modern asset management platform, Kendziora chose Asset Panda for a few core reasons:

- Customizable fields
- Depreciation tracking
- Robust reporting

The Results

Since implementing Asset Panda, the St. Francis team has realized numerous benefits, including a **98% reduction in reporting time.**

“[Reporting] used to take me two days on a semi-annual basis; now, on a monthly basis, it takes me about an hour,” Kendziora said.
