COHESITY

IT'S A NEW ERA FOR CYBER RESILIENCE

Gain scale and strengthen data security with the power of our combined portfolio.

Now is the moment to focus on cyber resilience

Your data has always been the lifeblood of your organization. And knowing it's secure and protected allows you to do what you do best, no matter your industry or your geography. But how can you be confident in your ability to respond and recover from the inevitable cyberattack?

After all, challenges are mounting every day. Cyber threats are growing in frequency and sophistication, and their impact is costlier than ever. And data estates are sprawling and siloed, so you don't always know where your data lives or whether it's all protected.

Solving these challenges requires a shift.

When you shift your focus to AI-powered data security and cyber resilience, these challenges become opportunities.

A new world of opportunity with secure cyber resilience

Attacks are far more destructive than most people—and organizations—realize. They're more difficult to investigate and certainly more difficult to recover from than a disaster.

You can't afford to be caught unprepared.

So, imagine moving your organization from a reactive to a proactive stance. From having a defensive strategy that exists only on paper to a comprehensive response and recovery strategy that you regularly test, refine, and improve upon. You'll harden your platform and rehearse critical investigation and mitigation steps, and have the right partner to help you prepare, respond, and recover now and into the future.

This is the confidence a comprehensive cyber resilience posture can provide.
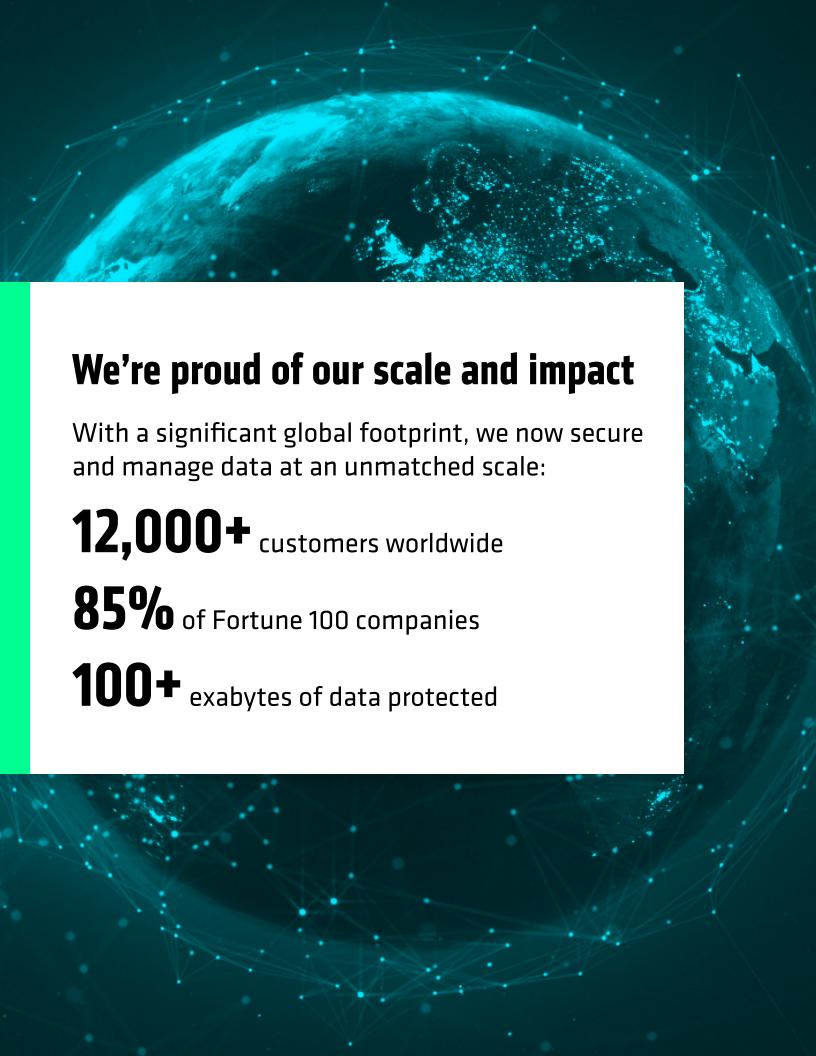

And we help customers like you achieve it.

We also help organizations like yours improve their cyber resilience maturity, so you can:

- **Protect all data with global governance**
- **Ensure your backups are always recoverable**
- **Detect and investigate threats**
- **Prepare, practice, and recover from incidents**
- **Reduce your risk from data theft**

This just scratches the surface.

The opportunities for all our Cohesity customers, both longstanding and new, have never been greater. With our seamless approach and combined portfolio, you can defend, manage, and derive value from your data—all in one platform.

We're proud of our scale and impact

With a significant global footprint, we now secure and manage data at an unmatched scale:

12,000+ customers worldwide

85% of Fortune 100 companies

100+ exabytes of data protected

Combined expertise means more customer benefits

We've created one of the largest partner ecosystems in the industry, covering cloud service providers, security players, VARs, system integrators, MSPs, technology ecosystem partners, distribution partners, and hardware OEMs.

That we're the trusted choice in enterprise cyber resilience is meaningful, but what's more significant is this: Our combined expertise means you now get the benefit of an even stronger foundation in data protection and cyber resilience.

Our expanded portfolio translates to:

- **Even faster recovery** with recovery times cut by hours or even days. Thanks to AI-powered detection and response, your organization can recover clean data quickly and avoid downtime.

- **Stronger security** thanks to our Zero Trust architecture and AI-driven defenses. Built-in immutability, encryption, and access controls prevent unauthorized access and ensure compliance.

- **Unified simplicity** with a single, easy-to-use platform for backup, compliance, and threat intelligence. Enjoy streamlined management and operations, and reduced security complexity.

- **Enhanced data insights** and AI-driven analytics. You can search, classify, and extract value from your data, improving decision-making and reducing compliance risks.

- **Comprehensive, multicloud workload support** from our combined team of experts. You get flexibility for all data environments (on-prem, cloud, SaaS) with secure and compliant data management.

You, your organization, and your data can count on all these benefits.

And be confident that our capabilities, and your cyber resilience, were built with evolving and proliferating threats firmly in mind.

What's next for you: Our customer-centric roadmap

With our combination complete, our focus moving forward is twofold: continuity and future improvements.

Here are four key parts of our product roadmap strategy:

1 **There will be no immediate changes to existing products.** (Of course, we'll continue to enhance them over time.)

2 **You can count on our continuous support.** All workloads (on-prem and cloud) that are already supported by both companies will continue to be supported in our long-term solution.

3 **Any transitions will be customer-first.** If migrations do occur, they'll be optional, streamlined, and fully supported. Migrate when and if you want, on your own schedule.

4 **Expect new AI, security, protection, and coverage innovations.** We're excited for customers like you to better understand your data and manage your risks.

The truth is this. Cyberattacks are the number one threat to organizations.

But despite a worsening threat landscape, we're better positioned than ever to deliver intelligent, scalable solutions for data security, cyber resilience, and AI-driven insights.

Learn more about how we're helping your organization stay secure and resilient.
